# 1. Introduction

## 1.1 Purpose

This document highlights new features, bug fixes and improvements in this release of Data Entry Workflow (DEW) 10.0.28.3 from To-Increase B.V. This release is compatible with the version of Microsoft Dynamics 365 for Finance and Operations, 10.0.25 and higher.

## 1.2 Audience

This document is intended for new users of Data Entry Workflow partners and customers. Some knowledge of Dynamics 365 for Finance and Operations is assumed.

## 1.3 Deliverables

Deliverable	Description
<b>Solution package</b>	Data Entry Workflow is delivered as a Microsoft Dynamics Lifecycle Services (LCS) solution package.
<b>Software deployable package</b>	Data Entry Workflow 10.0.29.4
<b>Release notes</b>	This document is provided with the Data Entry Workflow product deliverables.
<b>Implementation methodology</b>	The solution package contains a <i>Data Entry Workflow implementation methodology</i> that provides detailed step-by-step instructions on how to install, learn, and implement the solution.
<b>Getting started BPM library</b>	The solution package includes a <i>Getting started with Data Entry Workflow</i> BPM library. This library contains several task guides that showcase some of the key capabilities of Data Entry Workflow.
<b>Documentation BPM library</b>	We are working on the documentation for <i>Data Entry Workflow</i> . This is not published as BPM library on the moment of this release.
<b>Authentication assets</b>	A To-Increase security certificate is provided to allow trusted installation of the provided model files and ISV license files.

## 2. Bug Fixes

### Internal

- Delegate text is wrong in Dialog box when we click on delegate button
  - Fix: The label has been corrected and it is now dynamically adjusting based on whether the dialog opens for Reject or Delegate.
- Compile correct Person name based on detail fields like first, middle and last name.
  - Fix: To be able to create a 'Person' type customer, specific logic has been added to handle the name compilation based on the system's name sequence.

### 3. Known Issues and limitations

In this section the known issues and limitations that are currently in DEW will be highlighted. These issues or limitations can also be due to standard Dynamics 365 limitations. Known issues and limitations:

- User can setup alerts as notifications. A data entity to continue with data outside of Dynamics 365 is not available yet.
- The copy process is assuming it will always write data to records with the exception of product dimension groups which are used for lookup purposes. It would imply that if you e.g. have the Sales Tax/VAT number table to create a new record an link it directly to a customer or vendor, it will now assume that the VAT number will not be empty as it tries to insert or update an existing record in the reference table.

We have items on the roadmap that will improve the product. If you want to learn about upcoming features you can contact To-Increase.

In general, the Data Entry workflow can work for any regular table and field, regardless if it is part of the standard, an ISV solution, customization or configured custom field. We have concentrated our testing on master data entry: Customers, (Released) Products, Vendor and Vendor bank accounts. We did test some other tables as well. If there is any specific behaviour which needs attention to get the recording or processing better for your scenarios, please contact us so we can improve the solution.

Together with the solution, we provide sample data entry workflow templates. The tutorials are provided 'as-is' and not supported as part of the main application. The examples are mainly intended for learning and demo purposes. Before using them in a production environment, you must verify if they will work as per your expectations.

Microsoft is continuously adding new features in the application directly and via Feature Management. Sometimes these are public preview and will be made generally available in future releases, in other cases, they are already general available, and you have the choice to activate them. Currently, we are not testing compatibility with all new features or combinations. Once a feature is enabled at the customer environment and in case of any issues or questions related to new standard features and our solutions, kindly contact us via To-Increase support.
