# 1 General

## 1.1 Purpose

This document describes the functionality that has been developed for Dynarent - Anywhere for Rental 10.0.35.48. It also elaborates on the known issues for this release, and it provides more information about the underlying structure of the application.

## 1.2 Compatibility

In some cases, an update of the DynaRent Mobile App requires an update of the DynaRent version of the linked D365 Finance and SCM instance to be fully compatible. The following table lists such dependencies.

*Dynarent 10.0.35.48 for Dynamics 365 Finance and Dynamics 365 Supply Chain Management (10.0) is built upon D365 version 10.0.33. Since Microsoft maintains a no breaking changes policy, the fact that this release is built on this version means that it can be applied to an environment running on D365 version 10.0.33 or any later version and the application should compile without any issues. However, as we have only functionally validated this version against D365 version 10.0.35, we recommend applying our TI product release on that MS version as well. If you deviate from this (and thus apply the release to a different version), we recommend performing a more thorough round of testing before applying the release to a production environment.*

*This is summarized in the following table.*

Release date	TI-Version number	Minimum required D365 version	Validated against D365 version	Compatible with D365 version
14/07/2023	10.0.35.48	10.0.33	10.0.35	10.0.33 and above
16/12/2022	10.0.31.46	10.0.29	10.0.31	10.0.29 and above

*In case of an Error, To-Increase may provide a Hotfix on a reasonable efforts basis in a way it considers appropriate in its discretion. To-Increase cannot be obliged to provide Hotfixes if Client has not deployed the latest Release or the Release second to the latest Release and/or is not using a supported version of Microsoft Dynamics.*

*To ensure our customers can fully leverage the latest enhancements, features, and quality improvements, we are committed to providing increased support by keeping them updated with the most recent releases. Our data indicates that customers on the latest version experience fewer issues and requests, demonstrate greater resilience, and effectively enhance their organizational efficiency.*

*More information about our latest available product versions, the latest validate GA-versions from Microsoft as well as the Minimum MS version required, please visit this page : [Knowledge Base - Support - To-Increase](#)*

## 1.3 Available languages

The Anywhere for Rental is only available in the English (EN-US) language. Other languages are currently not supported.

## 1.4 Security

A basic role with accompanying duty and attached privileges is shipped along with Dynarent - Anywhere for Rental 10.0.35.48. Not only does this provide a quick start, it also provides a basis for you to implement duties and roles as per your organization's specific requirements.

## 1.5 Upgrade from earlier versions

Upgrading to a newer version of the Anywhere for Rental is performed by importing a new solution file into your power platform environment and thereby replacing the necessary components. Regarding the release notes, note that they are incremental. So, if you are upgrading while skipping a few versions, you should read all the relevant in-between release notes.

## 1.6 Data entities

This release document contains a list of the data entities that are being supported. The data entities are used as foundation blocks for the functionality of the application.

## 2 Functionality

This chapter briefly touches upon main features for **Dynarent - Anywhere for Rental 10.0.35.48**. Further details can be found in the user guide shipped along with this release. This chapter also describes any discontinued features and the reasoning behind the discontinuation.

### 2.1 Key features

- Counting
- Picking
- Return
- (Mass) Return
- Rental shop delivery
- Rental shop return

#### 2.1.1 Counting

In Dynarent we have a rental counting journal which is for serialized and bulk items.

It is possible to count the items from the portal for Anywhere for rental.

In counting you can either scan a serialized business object or enter an item number for bulk.

What possible in D365 FO is possible to do from the rental portal.

#### 2.1.2 Picking

Pick and ship your rental orders with ease and accuracy, using the mobile app for real-time updates and changes. You will be able to pick serialized rental items, bulk/sales items both serialized and non-serialized, with batch Id etc.,

#### 2.1.3 Return

This feature comes handy when you know the specific customer or the rental order. You can just return all the items using the return functionality from the anywhere app and the return note will be posted back in FO. This specific rental return is normally used for low volumes, being returned.

#### 2.1.4 Mass return

This may also be named anonymous mass return, usually for large volumes of items returned, where you don't know of a specific customer or the rental order. This just happens just by scanning a serialized business object which is an identifier for the rental order and therefore you can also retrieve customer information.

#### 2.1.5 Rental shop delivery.

This is an at desk – delivery.

Rental shop delivery is a fast process to rent out high volumes of equipment over a counter using a rental card. Rental card is attached to a worker on a project and is used to scan the bar code on the equipment. When the rental shop is within the site and the user wants to rent an equipment, project based, they just

scan the equipment, and it will be added to the rental order. All the items are scanned, you can post the rental transactions which will deliver the rental items without posting the packing slip like the regular orders which will take time.

### 2.1.6 Rental shop return.

Rental shop delivery is a quick process to return the of equipment over a counter., the same way it was rented.

### 2.1.7 Item Info

You can get a 360-degree real-time updated view of your rental equipment inventory to provide the right information to all stakeholders.

For example, a worker in a warehouse can see an equipment, wants to know specific information on an item about it. Just scan the item and see the info.

## 2.2 New features for this release

ID	Description
139825	

## 2.3 Discontinued features for this release.

No functional features were discontinued for this release.

## 3 Fixes summary

This chapter describes the issues that have been solved for this release as pre-releases.

### 3.1 Fixes for this release

ID	Description
170015	when scanning bulk item which is NOT part of the delivered rental order(s) of the customer. I suppose to throw an error message: "Item cannot be returned'.
170040	Sales items setup for picking in Anywhere for Rental. It is now possible to show both the sales and rental items on anywhere for rental.
170824	Rental counting: Calculation quantities serialized rental items incorrect
170828	Rental counting: Validation adding serialized rental items not working
170831	Rental counting: Journals in portal are duplicated. Now this is fixed too.
170885	Counting an item which is in another open journal should not be possible. Now it is the same error/validation thrown in D365, that this is locked for updates.
163116	If we try to scan any bulk item on mass return it always shows me the wrong item and qty. This is now fixed.

### 3.2 Fixes for the previous releases

ID	Description
160916	When using Scan item for Sales Serial and Sales Batch items, Items are not picked. Select line does works, and when you use this and unpick, the scenario of Scan item works (strangely) – This is now fixed.
160954	During the rental return, if the return date is modified manually, the same is not shown on the rental return order and the return note journal and it shows the off-rent date. – This is now fixed.
161269	Error on running the fill cache functionality, " Error executing code: DNRANYMassReturnPopulateOrderLinesDataService object does not have method 'main'. is fixed."
163107	Cannot access related information from mass return staging – This is about correcting the hyperlinks on the mass return staging like object number, rental order number.

## 4 Known issues

This chapter describes the issues that have been known for this release. It also elaborates on why the issues have not been solved and provides an alternative way on how to cope with them, if any.

### 4.1 Known issues for this release

N/A.
