1 General

1.1 Purpose

This document describes the new functionality that has been developed for DynaRent Customer Portal. It also elaborates on the known issues for this release and it provides information about the underlying structure of the application.

This document is primarily meant for product- and implementation consultants familiar with the concepts of DynaRent and the DynaRent Customer Portal.

This document explains the content of the delivery package to consultants of To-Increase partners.

1.2 Compatibility

In some cases, an update of the DynaRent Customer Portal requires an update of the DynaRent version of the linked Microsoft Dynamics 365 Finance and Operations instance in order to be fully compatible. The following table lists such dependencies.

Release DNR Customer Portal	Minimum required DNR version	Minimum required D365 version
10.0.23.38	10.0.23.38	10.0.23

The DynaRent Customer Portal continues to work on older versions and can be implemented on older DynaRent versions, however this will not support the full capabilities of the DynaRent Customer Portal.

1.3 Available languages

The DynaRent Customer Portal is only available in the English (EN-US) language. Other languages are currently not supported.

For other languages, please contact your Service contact at To Increase.

1.4 Security

Several roles with accompanying duty and attached privileges are shipped along with DynaRent Customer Portal. Not only does this provide a quick start, it also provides a basis for you to implement duties and roles as per your organization's specific requirements.

The security is based on standard Microsoft security measurements on Microsoft Dynamics 365 Finance and Operations, Microsoft Power Apps and Microsoft Dataverse.

1.5 Upgrade from earlier versions

Upgrading to a newer version of the DynaRent Customer Portal application is performed by importing a new solution file into your power platform environment and thereby replacing the necessary components. Regarding the release notes, note that they are incremental. So, if you are upgrading while skipping a few versions, you should read all the relevant in-between release notes.

1.6 Data entities

Each release will contain a Field Mapping document.

This Excel-file named DynaRent Customer Portal 10.0.23.38 for Microsoft Power Apps - Data Integration Project Field Mappings contains a list of the data entities that are being supported.

The data entities are used as foundation blocks for the functionality of the application.

1.7 Deliverables

With this release we deliver the following:

1. Release Notes December 2021 (version 10.0.23.38)
2. DynaRent Customer Portal 10.0.23.38 for Microsoft Power Apps - Data Integration Project Field Mappings
3. DynaRent Customer Portal 10.0.23.38 for Microsoft Power Apps - Installation Guide
4. CRM Package for DynaRent Customer Portal (DynaRent Customer Portal 10.0.23.38.zip)

2 Functionality

This chapter briefly touches upon any core features for DynaRent Customer Portal. Further details can be found on [To-Increase Documentation](#) shipped along with this release. This chapter also describes any discontinued features and the reasoning behind the discontinuation.

NOTE: At the time of writing these release notes, our Online Help regarding the DynaRent Customer Portal was still Work In Progress, our site [To-Increase Documentation](#) will be updated with the relevant information as soon as possible.

Microsoft is continuously adding new features in the application directly and via Feature Management. Sometimes these are public preview and will be made generally available in future releases, in other cases, they are already general available, and you have the choice to activate them.

Currently, we are not testing compatibility with all new features or combinations.

Once a feature is enabled at the customer environment and in case of any issues or questions related to new standard features and our solutions, kindly contact us via [To-Increase support](#).

2.1 Core Functionality

Core Functionality is described on [To-Increase Documentation](#).

It includes functionality allowing DynaRent Customer Portal users to check their rentals, invoices and manage their cases.

2.2 Discontinued features for this release.

No functional features were discontinued for this release.

3 Post Release Defects Resolutions

This chapter describes the issues that have been solved for this release.

3.1 Post Release Defects Resolutions for this release

Functional area	ID	Description

4 Known issues

This chapter describes the issues that have been known for this release. It also elaborates on why the issues have not been solved and provides an alternative way on how to cope with them, if any.

4.1 Known issues for this release

The following functional issues have been known for this release.

Functional area	ID	Description
Customer Portal	138011	Microsoft Power Apps standard support "confirm email" functionality, however this is not required in the solution, therefore this option is hidden.
Field Mapping	137763	Non-project driven Invoices not shown due to empty Invoice Line Type. It seems for non-project invoices the Invoice Line Type is not set to "standard" in Data Integration Job and default value is empty for type.
Field Mapping	137994	Rental Order No not shown on Invoice, seems Rental Order No is not a part of the Data Entity Export.
Data Integration Project	133949	GPS coordinates are sync only initially and cannot be changed later on. Needs to be checked, could be in Data Integration Project, which is on customers side of the installation.
Data Integration Project	138203	Order Line Status showing as "Quotation inspected " instead of delivered. Is related to Data Integration Project, which is on customers side of the installation. Probably transformation is not correct.
