1. General

1.1 Purpose

This document describes the contents of Advanced Maintenance and Service 10.0.30.25 for D365 Operations 10.0. This release is monthly update for AMS for D365 FO.

See chapter 2.1 for the new functions and features, chapter 3.1 for fixes and chapter 4 for known issues.

Purpose of this release is:

Topic	Yes/ No	Remarks
Upgrade to new Microsoft release	Yes	Release is compatible with D365 10.0
New features	Yes	
New D365 functional topics considerations	No	
Bug fixes	Yes	Refer section 3.1
Discontinued features	No	

See chapter 4 for known issues.

1.2 Audience

The audience for this document is certified partners selling and implementing as well as customers who have bought the solution.

1.3 Content list

Advanced Maintenance and Service 10.0.30.25 for D365 Operations 10.0 is released on the following Microsoft Dynamics 365 build.

Installed product version	Installed platform version	Remarks
Microsoft Dynamics 365 for Finance and Operations (10.0.27)	Update 51 or higher	

Advanced Maintenance and Service is compatible with the following solutions for Microsoft Dynamics 365 for Finance and Operations, Enterprise edition 10.0

Product	Remarks
Rapid Value	Optional, requires separate license
Advanced Project Management	Optional, requires separate license
Advanced Project Planning	Optional, requires separate license
Product Engineering	Optional, requires separate license
Business integration Solutions	Optional, requires separate license
Invoice Workflow	Optional, requires separate license

Note that it cannot be excluded that above solutions may require merge efforts when applying them in one combined installation. This may affect functions and features of one or more of these solutions.

1.4 Upgrade from earlier versions

Upgrade from previous version for Dynamics 365 Finance and Operations is supported via the standard upgrade tools and best practices.

Upgrade from earlier versions than Dynamics 365 7.3 or from AX 2012 is not supported.

2. New features

2.1 Common features

To-Increase is offering various add-on solutions. Some features and technical solutions are common or could be common for all our solutions on the Dynamics 365 Finance and Operations platform. As of November 2022, we will start leveraging a new common library model.

The common library model will be a centralized location where the new common features will be added automatically, and customers don't have to make an additional effort to update the build pipelines after the first enablement of this model.

ISV licensing is technically supported with a code signing certificate. The certificate we must use is expiring every three years, next up for renewal in 2023. Soon, our solutions will refer to this common model for the code signing certificate, instead of maintaining it separately in all our solutions.

Next to technical content, the common library comes with features which are beneficial to our customers. E.g., a solutions Management dashboard gives a clear view of currently installed versions, status of license, option to renew licenses without any downtime, easy access to release notes and documentation, and the ability to leave feedback through the in-app feedback system.

The screenshot displays the 'To-Increase solution management' interface. On the left, there is a table listing various solutions with columns for 'Solution', 'Installed version', and 'Status'. The 'Advanced Discrete Manufacturing' solution is highlighted. On the right, a detailed view for 'Advanced Discrete Manufacturing' is shown, indicating that the solution is not installed. Below this, there is a table of licenses with columns for 'License', 'Status', and 'Expiry date'. The 'Construction' license is highlighted.

2.2 New for this release

- **Tool Crib**

Tool crib provides easy management of tools

Handout of tools

Return of tools

Toll state log

- **Work Order Kitting, Update Work Order Stage**

Automatically update work order stage when updating status on work order kit(s) Added setup for mapping of kit status and work order stage

- **Mobile client**

Work execution: new object tree view as an alternative when searching for objects Work order lifecycle

state log

Planning board: Introduce month view Introduce better handling of multi-day view on smaller screens

- **DFO-4196 Advanced - Print QR Code Report of Object Identifiers**

It is now possible to generate and print a report of object identifiers in the form of QR codes.

- **DFO-4975 Advanced - Work Order Procurement Status**

Added new inventory status - Consumed and fixed missing update of stage work orders with only an inventory requirement.

Updates for Mobile Client 2210.0.1

Note: A reminder that the application has been split into two separate applications: one for the planning board and one for work execution (and service portal). This means that to use both, two different websites must be installed, either as

- Two different sub-domains (using two App Services), e.g., <https://my-company-mobile.azurewebsites.net/> and <https://my-company-plan.azurewebsites.net/> Or
- Two sub folders in the same domain (using one App Service), e.g., <https://my-company.azurewebsites.net/mobile/> and <https://my-company.azurewebsites.net/plan/>
- To keep links in the navigation menu, the following module configurations must be filled in:
Navigation from work execution to planning board:
Asset management > Work orders > Planning board mobile application
Navigation from planning board to work execution: Asset management > Planning board > Work execution mobile application and the individual user must have the modules enabled as well.

2.3 New for previous releases

2.3.1 **New for release Advanced Maintenance and Service 10.0.28.24 for Dynamics 365 Operations 10.0**

- **DMO-4462 General - Improved offline experience**

Improved the user experience while working offline by ensuring that all icons are cached to give the same look and feel offline as the user has while online

- **DMO-3659 Settings - Display all used legal entities**

All previously used legal entities are now easily accessible through the settings page.

- **DMO-4999 Work orders - Expenses - Updated pages related to expense registrations**

Updated the pages related to expense registrations so that the user can now properly list and manage their expense registrations in the application.

- **DFO-4349 Work Order - Fixed Custom View Issue When Creating New Work Order**

There has been fixed a bug introduced by Microsoft in 10.0.26 product version in case when some custom view has been set up as default on work order details form. This caused a problem related to the fact, that just after creating new work order (e.g., from project, from object), system was displaying details of first work order found in the system (not details of newly created work order).

2.3.2 New for release Advanced Maintenance and Service 10.0.25.23 for Dynamics 365 Operations 10.0

Package fix (Add license model correctly)

2.3.3 New for release Advanced Maintenance and Service 10.0.25.22 for Dynamics 365 Operations 10.0

Dynaway Mobile Client (stable 2204.0.1)

The application has been split into two separate applications one for the planning board and one for work execution (and service portal). This means that to use both, two different websites must be installed, either as:

- Two different sub-domains (using two App Services), e.g., <https://my-company-work.azurewebsites.net/> and <https://my-company-plan.azurewebsites.net/>
- Or two sub folders in the same domain (using one App Service), e.g., <https://my-company.azurewebsites.net/work/> and <https://mycompany.azurewebsites.net/plan/>

2.3.4 New for release Advanced Maintenance and Service 10.0.24.21 for Dynamics 365 Operations 10.0

- New module Maintenance data import has been added. This enables import of flat files from Azure file storage. The module is a framework intended to be extended with additional sources and maintenance data types to be imported.

2.3.5 New for release Advanced Maintenance and Service 10.0.20.19 for Dynamics 365 Operations 10.0

- **Mobile - Planning Board - Work order stage colors used on the planning board**
Updated the planning board to color cards and icons on the grid by which work order stage they are in.
- **EAM -Work orders - Change object when creating related work order**
It is now possible to change the object when creating a related work order. The default will still be the same object as on the originating line.
- **EAM - Work orders - Manually type in actual start and end date on changing work order stage**
When updating the work order stage to one requiring actual start and/or end to be set, the worker is now prompted to fill in these values.

2.3.6 New for release Advanced Maintenance and Service 10.0.17.18 for Dynamics 365 Operations 10.0

- **Mobile - Items - Product image is now shown if available when searching for items**

If a product image has been specified for an item, it is now shown in the search result when searching for items using the mobile client. The product image is now also available for the object BOM items.

- **Mobile- Objects - Expand or collapse all timeline entries**

Added functionality to expand or collapse all entries in timeline of an object with one click.

- **Mobile- Objects - Search in timeline**

It is now possible to search in the timeline of an object. Events which do not fulfill the search term are hidden. The search is performed on all available field values of an event, e.g., work order ID or request description.

2.3.7 New for release Advanced Maintenance and Service 10.0.16.17 for Dynamics 365 Operations 10.0

- **EAM - Fault Designer - Create combination for all types**

From the fault designer it is now possible to create fault combinations for all types, rather than one by one. Also, a filter function has been added, showing types with missing setup.

Applicable for Advanced EAM and Advanced Asset Management.

- **EAM - Work Order Journal - Item Name**

Item name column has been added to the item grid for work order journals.

- **EAM - Work order stage update**

Restrictions to Stage Movement: Additional, user and user group -based control of manual stage changes for objects, functional locations, and work orders.

- **EAM - Linked Job Types**

It is possible to add a linked job type setup to a job type setup. Such linked jobs are automatically created when a work order line which uses the job type setup is created.

- **Mobile - Added handlers for creating procurement for work order lines**

Based on solution from AX 2012 new handlers enabling possibility to create purchase requisitions with items or procurement categories based on work orders have been added to mobile solutions for EAM and AM.

- **Mobile - Changeable 'Responsible' fields**

A new configuration has been added enabling users to edit the responsible fields on a work order.

- **Workspace - Work Order Management**

Work Order Management has been prefixed with EAM to make it different from standard workspace.

- Planning Board**
 Updated handling of saved search list on planning board to calculate and display total forecast hours on a work order with multiple forecasts.
- Planning Board - Added keyword search on selected saved search**
 Added the option to filter the currently selected saved search with a keyword search, which searches on *workOrderId*, *jobTypeId*, and *staged*
- Planning Board - Can now rearrange workers in created teams**
 It is now possible to rearrange workers in teams created on the planning board. This means that they are no longer automatically sorted alphabetically.
 The default *All workers* team cannot be rearranged.
- Planning Board - Can now show/hide weekends on the planning board**
 It is now possible to show/hide weekends on the planning board. This setting cannot be changed while creating a draft.
- Planning Board - Collapse/open side navigation**
 It is now possible to collapse and reopen the side-navigation panel to maximize the space given to the planning grid.
- Planning Board - Improved detailed view in 14-day calendar**
 Improved how information is displayed on the schedule cards on the planning board while using the 14-day view.
- Planning Board - Added option to filter by work order stage / lifecycle state**
 Introduced the option to filter saved searches on the planning board by work order stage / lifecycle state. It is only possible to choose those where *Allow scheduling* is enabled.
- Requests - Date ranges now look back in time to give requests from the past x days**
 Changed the date range for request saved searches to look back in time, as requests cannot be created in the future.
- Saved searches - The lists of saved searches are sorted alphabetically**
 The lists of saved searches for object/assets, requests, and work orders are now sorted alphabetically. The lists provided by the application itself, i.e. *work scheduled to me* and *Downloaded objects/assets/requests/work* are still placed at the bottom of the list.
NOTE: The sorting is different for different browsers. Apparently, Edge reads Å as AA so it is before Ab in the sorting, while Chrome puts Å after Ab.
- Work orders - The responsible worker of a work order can be changed**
 It is now possible to change the responsible worker of a work order on the work order detail page if it has been enabled for the user in the module configuration.

2.3.8 **New for release Advanced Maintenance and Service 10.0.14.16 for Dynamics 365 Operations 10.0**

- No new features

2.3.9 **New for release Advanced Maintenance and Service 10.0.14.15 for Dynamics 365 Operations 10.0**

- **Advanced EAM - Change Job Type Setup Combination**
A new functionality has been added, making it possible to change the combination of a job type setup record
- **Advanced EAM - Work Order Descriptions**
Work order type has been added to work order descriptions, making it possible to set up descriptions based on work order type. A description can only be linked to one work order type. Data entities has been updated.
- **EAM - Changed label texts for security roles**
Label texts for all EAM security roles have been changed by adding prefix 'EAM' to them. In that way we avoid duplication of security role names in system security setup.
- **EAM - Enabled editability for dates in worker groups form to improve user experience comparing to similar standard forms like resource groups form.**
- **Mobile - Configuring start day of the week for the mobile planning board**
A new module configuration “Week start day” has been added to the planning board section in the module configuration. The setting controls which week day will appear first on the planning board.
- **Mobile - Default description in hour journals**
If no description is provided when registering hours on the mobile the same default description is applied as if it had been registered directly in the D365F&O client.
- **Mobile - Default description on work order lines created on mobile**
If no description is provided on a new work order line created on the mobile client a default description is added when it is saved in D365F&O. The default description comes from the job type setup/default and if none is configured there a description from the job type is used.
- **Mobile - Update to configuration and license keys**
The license for “mobile offline assets/objects” has been removed and the functionality is now provided as part of the base license for the mobile solution.
The license for “mobile offline inventory” has been renamed to “mobile advanced inventory”.
Important: If using this functionality, please request an updated license file from support.
- **Mobile - Asset BOM on item registration page**
The asset BOM is now visible on the item registration page, and the worker can register use of any of these items with a single click.
- **Mobile – Option to select the first day of the week for the Planning Board**
The start day of the week can now be specified for module configuration of the Planning Board. If updated, it will be set the next time the planner logs in to the mobile app.

- **Mobile – Option to update request stage/lifecycle state**

The stage/lifecycle state of the request can now be updated on the request detail page. The list of valid stages for the worker is defined in the module configuration.

- **Mobile - Checklist lines of type Date Time now supported**

The checklist lines of type Date Time can now be used on the mobile client.

- **Mobile - Extended fields for saved searches**

The worker can now configure saved searches to filter by asset type/object type, manufacturer/product, and model.

The worker can now specify the saved search to only show requests where no work order has been created.

The worker can now configure saved searches to filter by responsible worker and responsible worker group.

If a responsible worker has been assigned to a work order, this information is now readily available on the detail pages for both the work order and the detail pages for any lines/jobs on that work order.

It is now possible for the worker to specify saved searches to filter on entities where specific fields have not been filled in, e.g. no serial ID on objects /assets or no responsible worker group on work orders.

- **Mobile - Forecast lines can be used to help the planning effort on the Planning Board**

If a work order line/job has multiple hour forecasts, these are now visible on the planning board.

They can also be used to split the work into multiple schedules based on the forecasted hours, e.g. a work order job with one line and three hour forecasts for 1h, 2h, and 3h respectively can now be easily split into three schedules of 1h, 2h, and 3h durations. When planning the specific line, the planner is immediately informed that there are multiple hour forecasts and can split according to these with one click. It is also possible to later open the schedule detail popup and ***forecast split* to get the list of schedules, which can then be rescheduled to other workers or times.

- **Mobile - Improve readability of worker capacity on Planning Board**

The readability of available and remaining capacities for workers has been improved by keeping the hour totals closer to the employee information and

highlighting the capacity bars on the planning board calendar grid.

- **Mobile - Improved visibility of notes and attachments on checklist line headers**

If there are notes and/or attachments on checklist line headers, this is now visible immediately in the UI so that the worker does not have to use multiple clicks to get this information.

- **Mobile - Item registration and item forecast settings now work independently**

It is now possible to setup item registration and item forecast settings so that any combination of these are a valid combination:

- Item registration + item forecast modification: The worker can view, create and edit item registrations and item forecasts
- Item registration: The worker can view, create and edit item registrations
- Item forecast modification: The worker can view, create and edit item forecasts
- None: The worker can do nothing with regards to item registrations or item forecasts

- **Mobile - Request stage/lifecycle state visible on request detail page**

The request detail page now shows the current stage/lifecycle state of the request.

- **Mobile - Primary functional location for worker now applies to the mobile app**

If a worker has a primary functional location, that location now applies to all saved searches and the offline object/asset setup.

- **Mobile - Set active=true for all saved search queries**

All existing and new saved searches will search only for active entities unless otherwise stated in the saved search configuration. This means that if the worker wants to see inactive assets, it must be actively chosen by the worker when creating or editing a saved search.

- **Mobile - Support for QR code scanning**

The worker can now use their device to scan QR codes instead of writing in search terms themselves. This has been enabled for searching for: Requests, assets, work, and items.

- **Mobile - Warning issued if team name is not unique on Planning Board**

If the planner creates a team with a name already used for another team, a warning is issued. The team can still be created, but it is recommended to use a unique name for it.

- **Mobile - Warning shown if language is changed from default language**

If the worker changes the language on the mobile app, a warning is shown specifying that the language will be reset upon logging in again.

2.3.10 New for release Advanced Maintenance and Service 10.0.12.14 for Dynamics 365 Operations 10.0

- New certificate added that replaces the certificate expiring on October 21,2020.
- Changed lookup of resource on work order journal. The lookup allows filtering on employee status

2.3.11 New for release Advanced Maintenance and Service 10.0.10.13 for Dynamics 365 Operations 10.0

- No new features

2.3.12 New for release Advanced Maintenance and Service 10.0.8.12 for Dynamics 365 Operations 10.0

1904.0.8.0

- New maintenance sequences added to functional location are now active by default
- Added line number for rounds on object form and round entity
- Added Work order stage to EAM BI Work orders entity
- Added entity for Production stop

2.3.13 New for release Advanced Maintenance and Service 10.0.6.11 for Dynamics 365 Operations 10.0

1904.0.7.0

- Added Data Management support for existing BI entities

2.3.14 New for release Advanced Maintenance and Service 10.0.6.10 for Dynamics 365 Operations 10.0

1904.0.6.0

- Added work order pool entity support
- Added fields (Object Type, Model, Product) to EAM Functional location maintenance sequences entity

2.3.15 New for release Advanced Maintenance and Service 10.0.6.9 for Dynamics 365 Operations 10.0

1904.0.5.0

- Added extension point when generating work order project IDs
- Mobile: Added support for searching of items by product name

2.3.16 New for release Advanced Maintenance and Service 10.0.4.7 for Dynamics 365 Operations 10.0

1904.0.4.1

- Checklists headers associated with a work order will now be included in the Work order report
- Entity support for Worker group relation
- Entity support for Preferred workers

1904.0.3.1

- No new features

2.3.17 New for release Advanced Maintenance and Service 10.0.4.7 for Dynamics 365 Operations 10.0

1904.0.3.0

- Added production stop to object timeline

2.3.18 New for release Advanced Maintenance and Service 10.0.4.6 for Dynamics 365 Operations 10.0

1904.0.2.1

- No new features

2.3.19 New for release Advanced Maintenance and Service 10.0.3.5 for Dynamics 365 Operations 10.0

1904.0.2.0

- Mobile: Added "Temporarily reserved"-field on item journals
- Mobile: Added partition field to 'synchronization' queries

2.3.20 New for release Advanced Maintenance and Service 10.0.2.3 for Dynamics 365 Operations 10.0

1904.0.1.0

- No New features

2.3.21 New for release Advanced Maintenance and Service 10.0.0.2 for Dynamics 365 Operations 10.0

1904.0.0.0

- Added functionality to customer lookups to only customers with active objects.
- Added Customer field to object entity.
- Added Tolerance fields to MROParmPlanSeqEntity.
- Added filter to Object view to only show customers with objects associated.
- Added Functional location as an option for the Project group setup.
- Improvements to Work order report; Better readability, bigger descriptions, Object names, stages
- Improvements to Checklist lookup performance

Mobile 1904.0

- Start mobile data Initialization in multiple companies in one operation and with possibility for parallel execution if running in batch
- Added missing handler on expense journal header (expense lines did not get marked as posted)
- Removed "Temporarily reserved" feature on item journals
- Avoid potential huge transaction scope during initialization of entities with many records
- Kanban – Fix WO Actual End being set when stage change fails
- Summary of totals on journal headers (hour, item, expense) was not performed when registering from mobile
- Planning board New WO count and sum of forecast hours handler. Better validation of schedules (now possible to see which has failed)
- Handle backend DB restore situation
- Set Scheduled start to Expected start when creating and scheduling work order from mobile (it was previously set to the point in time when the entity is processed by D365)
- Hour category defaulting sequence is now Worker > MROParameters > ProjParameters

2.3.22 New for release Advanced Maintenance and Service 10.0.0.1 for Dynamics 365 Operations 10.0

1810.1.0.4

No new features in this release

2.3.23 New for release Advanced Maintenance and Service 81.3.4.1 for Dynamics 365 Operations 8.1

1810.1.0.3

No new features in this release

2.3.24 New for release Advanced Maintenance and Service 81.2.1.3 for Dynamics 365 Operations 8.1

1810.1.0.2

No new features in this release

2.3.25 **New for release Advanced Maintenance and Service 81.1.1.11 for Dynamics 365 Operations 8.1**

1810.1.0.0

- Date interval for a maintenance sequence line

It is possible to specify a date range for maintenance. A particular job is planned on a monthly basis but is only required in winter times and therefore the system will only create work orders between November and March.

- Tolerance for overlap

In case we do monthly maintenance and yearly maintenance, most companies will skip the monthly at the moment the yearly is due. The user can set the overlap in days to determine if both work orders should be executed or that one can be skipped depending on the number of days between the two planned orders.

- Coverage for contracts or warranty editable

In the work order journal, the system will calculate the coverage percentage for hours, items and expenses based on the setup for a contract or warranty. The user has the ability to change the percentage which will influence the total amount due on the work order invoice, both in D365 FO as well as in the Mobile client.

- Offline item consumption on Mobile

The user can download the available inventory for a particular warehouse from AX on mobile. While offline, the user can consume items on the workorder from this warehouse and synchronize the consumption once back online.

Other improvements:

- Removed the use of 'UTC Now', replaced by 'System date time'
- Added metadata for document attachments for mobile
- Added specifications to functional location
- Added 'Split hours' on hour journal
- Added 'Change company' for mobile
- Added categories for planning board notes (with color coding)
- Added Customer, Customer group, and Sales price to cost control
- Added contract revenue to object cost control
- Added contract report
- Item registration on mobile now works in offline-mode like expense and hour registration
- Edit object specifications on mobile
- Edit functional location specifications on mobile
- Work order projects initialized from parent project (Project contract and validation of activity)

New data entities:

- Rounds (MROFunctionalLocationRoundRelation, MRORoundObject, MRORoundTable),
- Functional location specifications (MROFunctionalLocationSpecification)
- Work orders (create only) (MROWorkOrderLineAdvChecklist, MROWorkOrderLineAdvChecklistHeader, MROWorkOrderLine, MROWorkOrderLineForecastItems, MROWorkOrderLineNote, MROWorkOrderTable)
- Object items (MROParmInventTable)
- Maintenance stops (MROMaintenanceStop, MROMaintenanceStopObject)
- Item forecasts to Job type setup (MROParmJobTypeSetupForecastItems)
- Document attachments to Job type setup and Object Documents (MROObjectDocumentAttachments, MROObjectDocument, MROParmJobTypeSetupAttachments)
- Object criticalities (MROObjectCriticality)
- Workers (MROFunctionalLocationWorker, MROParmHcmWorker)

80.15.2.7

- Added option to report Object profitability by year.

2.3.26 New for release Advanced Maintenance and Service 81.20.1.5 for Dynamics 365 Operations 8.1

81.20.1.5

No new features in this release

2.3.27 New for release Advanced Maintenance and Service 80.15.3.4 for Dynamics 365 Operations 8.0

80.15.3.4

No new features are added in this release

2.3.28 New for release Advanced Maintenance and Service 80.15.2.7 for D365 Operations 8.0 Update 15 – August 2018

80.15.2.7

- Added option to automatically create objects when the sales order is delivered. In the company wide parameters it can be set up if Pending Objects are to be automatically turned into Objects, thus automating the step that was per definition manually up till now.
- The Object ID can be made equal to the serial number of the product during automatic creation from the sales order. Per Object item you can define if the Object ID is based upon the serial number, or on the number sequence for Objects.
- Create the object structure including serial numbers from specific items of the Production order consumption. Per Object item you can define if the Object structure is to be created. If yes, the Object structure will be created based on the items – for which Object Item setup is present - in the Production order that is linked to the sales order.
- Create the multi-level Object structure for intercompany deliveries. The scenario is supported where the sales order for the finished good is supplied via an intercompany purchase – sales relationship. In this scenario the child objects are created from the Production order in the supplying company.

- The ability to update the functional location for the automatic creation of the object from the sales order. This is done in the form Pending Objects.
- Automatically create work orders for that object or multiple objects on the automatic creation from the sales order. In the Pending Objects, it is possible to enter a maintenance sequence for the Object, this is also defaulted based upon Object type setup. At the moment of posting the packing slip a Schedule Maintenance Sequence is performed for this Object and Maintenance Sequence combination for 1 month.
- SLA is part of the service contract. Metrics can be defined per SLA to set targets in relation to the response times for the work order. The SLA is linked at the level of the contract type. The associated contracts are automatically associated with the applicable SLA metrics.
- Upon work order creation the applicable SLA is associated via the contract link. It is possible to link the work order to another SLA if that is applicable. When the work order is taken through the stages of its lifecycle the SLA metrics are determined and stored.
- The setup for maintenance sequence has been extended with an option to connect a maintenance sequence with a contract. At the moment a contract is activated or terminated, objects will be added to or removed from a contract. The update can be run in batch.
- Object profitability report showing the profitability of the object, based on contract value, maintenance cost (including warranty) and actuals.

2.3.29 New for release Advanced Maintenance and Service 1804.0.1.0 for D365 Operations 8.0 Update 15 – June 2018

1804.0.1.0

- Improved installment calculations for contracts. Objects are now used on one of each linetype.

1804.0.0.0

- Updated to 8.0, spring release 2018
- Added entity support for object criticality

Requires mobile client version: 93.2

2.3.30 New for release Advanced Maintenance and Service 1712.12.2.67 for Dynamics 365 Finance and Operations 7.3

1712.1.0.0

- Added advanced checklist
- Added planning notes for planning board
- Added customer requisition ID on work orders
- Added object specifications for work order report
- Added embedded power BI to work space
- Added configuration key to conditional assessment. Functionality to be replaced by checklists on work orders
- Added warranty information to work order and work order report
- Added object to contract payment lines
- Added parameter for real time update of job type references
- Configuration keys for fault hierarchy and inbound/outbound are now disabled by default

This version requires data upgrade. Please refer to document on which jobs to run.

- Requires mobile client version: 93.2

2.3.31 New for release Advanced Maintenance and Service 1712.12.2.66 for Dynamics 365 Finance and Operations 7.3

No new features are added in this release

2.3.32 New for release Advanced Maintenance and Service 1712.12.1.65 for Dynamics 365 Finance and Operations 7.3

The following features are added in this release:

1712.0.0.0

- Updated to 7.3, fall release 2017

Requires mobile client version: 92.10.5

1707.1.0.2

Requires mobile client version: 92.10.4

1707.1.0.1

- Document information added to request for use with service portal
- Added AX2012 data upgrade job
- Improved object timeline
- Criticality added to object overview
- Added show sign off report to work order stage entity
- Added object image entity
- Improved create object performance
- Copy project validation setup to sub-projects
- Create object, parent object validation

1707.0.3.0 &

- Added object counters to Work order report
- Added entity support for the table Job type setup description ("EAM Job type setup description")
- Added entity support for importing descriptions for job type setup lines through the existing EAM Job type setup entity

Note, there is no change to the Common model.

2.3.33 New for release Advanced Maintenance and Service 1707.8.1.8 for Dynamics 365 Finance and Operations July 2017

1712.0.0.0

- Updated to 7.3, fall release 2017

1707.1.0.2

Requires mobile client version: 92.10.4

1707.1.0.1

- Document information added to request for use with service portal

- Added AX2012 data upgrade job
- Improved object timeline
- Criticality added to object overview
- Added show sign off report to work order stage entity
- Added object image entity
- Improved create object performance
- Copy project validation setup to sub-projects
- Create object, parent object validation

1707.0.3.0 &

- Added object counters to Work order report
- Added entity support for the table Job type setup description ("EAM Job type setup description")
- Added entity support for importing descriptions for job type setup lines through the existing EAM Job type setup entity

Note, there is no change to the Common model.

2.3.34 **New for release Advanced Maintenance and Service 7.3.1611.101 for Dynamics 365 Operations 1611**

The following features are added in this release:

- Added workspaces:
 - Maintenance status
 - Work order management
- Added data entities:
 - Objects
 - Functional locations
 - Functional locations and object
 - Mobility setup
 - Requests (only active requests can be imported, not for historic transaction data)
 - Object specification
- Added new parameters to Schedule exclusively:
 - Scheduled hours
 - Scheduled start
 - Ignore calendar
- Added 'IsObsolete' on depreciated stage types, fields and tables

2.3.35 **New for release EAM 102.0.1.0 for Dynamics 365 Operations Update2**

No new features are added in this release.

2.3.36 **New for release EAM 101.0.0.31 for AX 7 Update1**

This release is the first release of EAM and ASM for AX 7. It focuses on an as-is uptake of the functionality of EAM and ASM for AX 2012 R3 CU9. The functions and features of this can be summarized as follows.

For the module Enterprise Asset Management:

Asset Management

- Functional Locations
- Multi-level Equipment Structure
- Fixed Asset Integration
- Equipment Specification
- Condition Assessment
- Spare Parts
- Equipment Register (Timeline)
- Equipment KPI
- Equipment Cost Control
- Functional Location Cost Control

Maintenance

- Preventive Maintenance
- Time / Usage based
- Ad hoc
- Maintenance Requests
- Estimates, Checklists, Tooling
- Fault Symptom, Cause & Remedy
- Fault Cost Control

Workorder Management

- Multi Equipment
- Estimating, Scheduling, Consuming, Closing
- Checklists & Measure Points
- Integration to Project Module
- Work Order Cost Control
- Work Order Date Control
- Mobility

For the module Asset Service Management:

Asset Management

- Work with all the features listed for Enterprise Asset Management listed above
- Contract Management
- Contract instalments

Maintenance

- Work with all the features listed for Enterprise Asset Management listed above

Work order Management

- Work with all the features listed for Enterprise Asset Management listed above
- Work order quotation

- Work order Invoicing

2.4 New D365 functional topics considered for this release

No new functional topics considered for this release.

2.5 New D365 functional topics considered for previous releases

2.5.1 New for release Advanced Maintenance and Service 10.0.28.24 for Dynamics 365 Operations 10.0

Updated Configurations.

Label	Description
<i>Under the Enterprise asset management > Work orders node</i>	
Item forecast line property	Should the line property input field be shown on item forecasts
Item forecast project category	Should the project category input field be shown on item forecasts
Lifecycle state show color	Should the lifecycle state color be shown on details and cards
Planning board mobile application	Link to the planning board application, so that it's possible to go to the planning board from work execution
Purchase requisition description fields	What should the default description of a new purchase requisition contain
Work order responsible worker outside group	Specifies whether user can assign a responsible worker to a work order outside of the responsible group
Work order schedule work status color	Should the work status color be shown on details and cards
Work order schedule work status validate checklist	Validate if mandatory checklists must be completed before work status can be set to Completed
Work order split schedule and assign to other	Allow splitting schedule and assigning split schedule to another employee
<i>Under the Enterprise asset management > Planning board node</i>	
Work order card color configuration	Specifies whether cards should be colored based on setting on work order lifecycle states, work status or not at all.

2.5.2 New for release Enterprise Asset Management 7.2.27075.90 for Dynamics 365 Operations Update 2

The option to include Power BI reports is used to create a EAM specific Power BI report.

2.6 Discontinued features as per current release

None.

2.7 Discontinued features as per previous releases

- The use of Time and attendance in combination with the mobile client is no longer supported.
- Removed setup for customers, not needed anymore
As part future replacement of conditional assessment by checklists on work orders a configuration key for condition assessment is added. See also 2.1.
- Removed page change for two side printing of work order report
- The option to create a work order directly from a case is not supported in Dynamics 365 for Operations.
- Work order times report has been removed

3. Fixes summary

3.1 Fixes for this release

ID	Title
DMO-4642	Authentication - Fix issue when using Edge on iOS/iPadOS Fixed an issue where using the Edge browser on an iOS/iPadOS device using MFA with the authenticator app on the same device could cause the authorization process to run in circles and finally fail.
DMO-5222	Planning board - Teams - Fix removing team member Fixed an issue where removing a team member would not persist resulting in the team member being back again when the planning board was reloaded.
DMO-5444	Service Portal - Create Request - Fix missing objects Fixed an issue where the objects could not be found when creating a new request
DMO-3594	General - Synchronization - Data loading bar Introduced Data loading bar on the top of the application displaying after the first time logging in until the first synchronization has completed its run. Most of the application is unreachable until this process has completed
DMO-1786	Redesigned Purchase Requisitions module Redesigned the Purchase Requisitions module, resulting in a cleaner and more readable overview of registered purchase requisitions and smoother user experience
DMO-5425	Work orders - Create - Fixed an issue creating work orders Fixed an issue where creating a work order on iPhone or iPad would fail because of a form submission error.
DMO-5001	Advanced inventory - Fix error when showing all items Fixed an issue where showing the list of all items available could cause an error in Safari, by introducing pagination on that page.
DMO-5297	Objects - Search - Add object tree view to object searches Added an object tree view to general object search areas, i.e. not when searching within a saved search. This allows the user to drill down from a location to the object they seek.
DMO-4880	Offline inventory - Fix missing warehouses when switching legal entity Fixed an issue where switching legal entity could cause the offline inventory to use a previously selected site and hence not be able to retrieve any warehouses.
DMO-4095	Planning Board - Calendar - Fix current day indication Fixed an issue where based on the timezone, the day highlighted as the current day would be one day off at certain hours of the day.
DMO-5296	Planning Board - Saved search - Add object name as search criteria on saved searches Added the object name to the list of properties being searched when performing a keyword search of a saved search.
DMO-5020	Planning Board - Saved search - Showing a loading indicator when getting data from a saved search Updated the saved search user experience, so that as long as the application is waiting for data, a loading icon is shown.
DMO-4849	Planning Board - View option - Added month view

	Added month view to the list of possible view modes for the calendar. It can still be with or without weekends, and by having Fit to screen turned off, the calendar will overflow on the x-axis and the user can scroll to see all of the calendar.
DMO-4193	Planning Board - View option - Added rolling calendar view Added the option to have a rolling calendar view meaning that today is start of the calendar and all operations, such as going to next week, are based off of today's date.
DMO-5019	Work orders - Hour registrations - Using from/to time now allows registering hours across midnight Improved the feature of registering hours using from/to time to now allow registering across midnight. Such a registration will automatically create one journal entry per day.
DMO-3982	Work orders - Item search - Searching for items for item registrations now also searches in the spare parts and BOM When searching for items for item or forecast registrations, spare parts and BOM are now also considered with all results available and distinguishable on the same page.
DMO-4566	Work orders - Search name shown in item search results for purchase requisitions The item search results on a purchase requisition now shows the search name as well as the item name to make it easier to determine why an item is in a search result set.
DMO-5337	Work orders - Work order stage log Added the work order stage log as a new page linked from the work order details page. The log is ordered chronologically with the latest change on top.
DMO-5327	Assets - Faults - Do not allow editing a fault registration directly from the object No longer possible to edit a fault registration directly from the object. This must be done from the related request or work order.
DMO-1786	Redesigned Purchase Requisitions module. Redesigned the Purchase Requisitions module, resulting in a cleaner and more readable overview of registered purchase requisitions and smoother user flow when adding or editing entries
DMO-3799	Synchronization - Synchronization frequency controlled by module configuration It is now possible to change the synchronization frequency of the mobile clients by updating the associated module configuration in D365. The default value is 30 seconds, and any value lower than 30 seconds are ignored.
DMO-2797	Work orders - Hour registrations - Register on behalf of others Using the associated module configuration, it is now possible to allow workers to register hours on behalf of other employees.
DMO-4979	Work orders - Item registration - Lock site and warehouse to functional location on new forecasts and item registrations Now uses the module configuration to lock the site and warehouse to those set on the functional location of the work order when creating item forecasts or item registrations.
DMO-4944	Work orders - Item registration - Use site and warehouse to functional location on new forecasts and item registrations Now uses the site and warehouse set on the functional location of the work order when creating item forecasts or item registrations as the default values.
DMO-1321	Work orders - Schedule new work order to another employee when creating it Using the associated module configuration, it is now possible to schedule a new work order to another employee from the create work order form.
DFO-4208	Advanced - Copy Work Order - Linked Job Types. Fixed an issue when copying a work order that had added work order lines through linked job types functionality. The copied work order did not have any work order lines added.
DFO-4396	Advanced - Linked Job Types – Copying

	Fixed a bug which would clear linked job types if linked job type setup copying was attempted to and from the same job type setup.
DFO-3581	Advanced - Maintenance Sequence – Procurement New functionality for creating purchase orders and purchase requisitions based on job type setup. Procurement elements are created when work order, related to job type setup with procurement setup, change its stage to one with 'Create procurement' set on.
DFO-4879	Advanced - Object Priorities - Job Type Fixed bug in which object priorities with only job type did not update correctly.
DFO-4238	Advanced - Work Order - Update Stage Service Fixed input field, the update stage to input field is now mandatory.
DFO-4757	Advanced - Work Order Kitting - Automatic Stage Update Work orders can now have their stage automatically updated when work order kit related to them is ready for pickup.
DFO-4680	Advanced - Work Order Kitting - Deletion Restrictions Fixed a bug where a work order kit could be deleted in state other than 'Created'.
DFO-4882	Analytics - MRO BI Job type setup entity BYOD export Fixed a bug preventing BYOD export for job type setup entity with Description field included.
DFO-4827	Contract Management - Update Stage Fixed issue with updating stage on a contract which resulted in a blank stage. Also added the possibility to update state from blank to enable used to fix data. Also improved the validation of deletion of contracts to only validate project if it is found
DFO-4829	Contract management - Instalment validation Fixed a bug where instalments would be firming even if no fees were created for them.
DFO-3647	Data Entities - Property adjustments Adjustment of data entity properties such as: tags, labels, application module for data entities.
DFO-4186	Dynaway - Overview File Updates Dialog showing which information is included in the overview file has been added Module metrics will be calculated if metric information is added
DFO-2780	Dynaway - Overview Updates Dynaway License & Configuration Overview has been renamed to Dynaway overview Feature nodes has been added Nodes are sorted alphabetically Nodes which are partially checked denotes that a sub node is unchecked
DFO-2980	EAM - Active Request Form Refresh Fixed bug which incorrectly refresh Active request form after creating new request.
DFO-4834	EAM - Job Type Setup - Create Forecast Two runnable jobs affecting the process of creating forecast on job type setup have been provided in Enterprise asset management --> Setup --> Runnable jobs page: Disable Microsoft "ProjActivityNumberCompletionCheckEnabledFlight" flight feature preventing forecast creation on closed project activities. Enable Microsoft "ProjActivityNumberCompletionCheckEnabledFlight" flight feature preventing forecast creation on closed project activities First runnable job disables problematic Microsoft flight feature introduced in 10.0.28 version, which prevents forecast creation on job type setup page. Second runnable job enables this Microsoft flight feature again.
DFO-3965	EAM - Object - Extended Characters Limit Character limit was extended from 20 to 80 characters for serial number, product and model. Display length for mentioned fields stays the same with 15 visible characters.

DFO-4265	EAM - Object - Form Part Grid - Counter Related Information Fixed an issue where counter form part grid in objects form was not refreshed when switching between object records.
DFO-4315	EAM - Object - Update Sub Objects Value is Not Found Fixed issues there no change is selected and error was shown. If no change is selected then the parent object only is used.
DFO-4820	EAM - Restored Missing Labels Fixed the issue related to missing labels which have been unintentionally removed in 2207 release. All missing labels used in EAM module and possible custom add-ons to it have been restored.
DFO-4538	EAM - Work Order - Project Quotation Amount Fixed a bug which clears out project quotation amount during creation or update. Bug occurred only after manual change of amount value on work order line item forecast.
DFO-4347	Labels - Updated Danish Labels
DFO-4946	Labels - Updated Norwegian Bokmål
DFO-4769	Maintenance Data Import - Import Messages Clean Up Every reprocess or re-import of file related to import message will clear out old logs.
DFO-4768	Maintenance Data Import - Manual File Import New 'Import manually' button has been added to 'Import messages' form.
DFO-3321	Maintenance Data Import - Modified "Message ID" text The dynamic "Message ID" text found in "Update message status" dialog form has been replaced with "Selected message" disabled input field.
DFO-3740	Maintenance Data Import - Modified Labels The labels were changed under "Import message types" form, from "Description" to "Example of date and time format" and "DATE FORMAT" to "DATE AND TIME FORMAT" text.
DFO-4221	Maintenance Data Import - Staging Data New form 'View staging data' on 'Import messages' form, which contains overview of imported data.
DFO-3452	Mobile - Item Forecast When an item forecast is created from mobile using item with default project category set on the item, the project category on the forecast will default to one on the item if no other is provided from mobile
DFO-3097	Mobile - Offline Inventory Offline inventory transfer requirements have been reduced due to reduction of image data transferred.
DFO-4553	Mobile - Query Functional Location Limitation Fixed a bug which prevented a worker without any limits regarding functional locations from selecting any functional location when creating a saved search list when worker functional location query limitation functionality was enabled.
DFO-4560	Mobile - Time Registration Fixed a bug where time registration would not be updated when updating worker from mobile client.
DFO-4536	Mobile - Work Order Line Created Automatically Based on Linked Job Types Setup Is Scheduled Properly Fixed a bug where work order line created automatically from mobile client and based on linked job types setup was not displayed correctly in Finance & Operations as scheduled line.
DFO-3585	Safe Work – Tagout

An additional validation has been added that checks if "Approved by", "Assigned to", "Tagged out by", and "Tagout removed by" fields have been filled out, in relation to the current tagout status, as a user might not be a worker.

3.2 Cumulative fixes from previous releases.

Note that this list contains the list of individual fixes. The fixes are not necessarily linked 1 to 1 to bugs as registered in the support system and only previous communicated bugs are numbered.

Advanced Maintenance and Service 10.0.28.24 for D365 Operations 10.0 Update 49

DMO-4056 Attachments - Improve support for files of certain file types

Fixed an issue that previously prevented you from opening documents of type .html, .url, and .note. In addition, implemented a functionality for the documents of type. note, where opening one which contains a URL, opens the link directly in the browser.

DMO-3268 Checklists - Make sure that when you input a value exceeding the defined interval the checklist line is marked with status FAIL

Improved error handling for checklist lines of type measure to set the status to FAIL if the input exceeds the valid value range. If it is within the range the status is set to PASS.

DMO-3274 Checklists - Show completed vs uncompleted number of checklist lines on the "Checklists" tab

The number badge on the "Checklists" tab found on the job detail page, now shows the total number of checklist lines vs. the number of completed checklist lines

DMO-4486 Icons - Updated the icons throughout for better navigation

Updated or added new icons throughout the app with ones that support the corresponding action/option better, in order to help users recognize and locate information quicker.

DMO-3383 Notifications - Show loading indication, while downloading an entity

While previously when downloading an entity (eg. Requests, Assets, or Work Orders), only an alert indication was shown, now the user is presented with a loading screen, which can also be dismissed.

DMO-4125 Offline - Show an indication when offline

Show an offline icon, to indicate that there is no internet on the device. In the case of no internet, an indication is also shown on the navigation menu.

DMO-3615 Offline Inventory - Redesign the Offline Inventory module

Redesign the Offline Inventory to better accommodate the usage of the module and improve the overall user experience. The page now focuses on the most important overview and communicates the different states of the inventory flow better. Moreover, the user now has the option to re- fetch the inventory with the introduction of the "re-fetch" button.

DMO-3668 QR scanning - Added QR/Barcode scanning to more pages

Enabled QR/Barcode scanning when searching for assets to more assets lists throughout the application, including: When searching on Work orders, Assets, and Request lists (saved searches)

When searching for items for item registration

When searching for assets when creating a work order job or a request

DMO-4682 Requests - Enable creating a Work Order from a newly created Request

Fixed an issue, which previously caused the "Create a Work Order" option on a newly created Request to not appear.

DMO-4508 Saved search - Improve the matching of the "Serial number" filter on Assets Saved searches

While previously a Serial Number Saved Search would only match fully defined numbers, now the users can define and match the serial number partially.

DMO-3719 Saved search - Search globally on each module on the lists pages instead of searching in lists

The search option on the lists page now searches globally for the specific type, e.g. work orders, assets, or requests. Moreover, when searching, clicking the cancel or back button navigates the user back to the lists page.

DMO-3276 Saved search - Work Status filter on Saved Searches

Added a Work Status filter when creating a Saved Search list, which enables the users to filter through work orders in a specific stage or set of stages.

DMO-3631 Translations - Enable translation into more languages

Added more language options to the application

DMO-3504 Translations - Improve the translation of different date formats

Translated the different types of dates and times throughout the application, corresponding to the available language settings and the appropriate local date/time format.

DMO-4741 Work orders - Brought back the Job Description field

Brought back the Job Description field to where it used to be found (under the Notes section on the Work Order Job page), while also keeping the editable title, which enables the users to change the job description, not only from the Notes section but also from the title.

DMO-4681 Work orders - Fix an issue with displaying the "Work Orders" list on an Asset

Resolved an issue that caused the related "Work Orders" list on an Asset to not display conditionally

DMO-3053 Work orders - Improved the menu options design when creating a Work order

Improved the design of the menu options on the Work Order details page (e.g., Add a Work Order, add a Work Order Job and Add a Related Work Order), where now the dropdown's responsivity is improved to support the readability of longer options better. Moreover, the different creation options are now supported with customized icons to better convey the corresponding actions.

DMO-3275 Work orders - Show realized vs. forecasted on number badges for the different "registration" tabs

Redesigned selected number badges to display:

hour registrations: total registered hours/ total forecasted hours

item registrations: total number of items registered / number of forecasted items

expense registrations: total number of registrations / total number of forecasts

DFO-3399 Advanced - Checklists - Default Values for Checklist Variables

It is possible to mark which value is the default one on checklist variable. Such default value can be automatically filled in on a work order checklist line related to this variable after clicking the "Set default values" button in work order checklist form. Note, the button 'Set default values' will only be shown if there are default values set up.

DFO-3413 Advanced - Checklists - Mandatory Notes

Notes for checklists can be set as mandatory to be filled out for work order checklists.

DFO-3825 Advanced - Deleting Work Orders and Lines

Two new services: "Delete work orders" and "Delete work order lines" have been provided. They can be scheduled for regular batch processing and delete automatically specified work orders and/or work order lines. Information about deleted work orders and work order lines is kept in delete work order log.

DFO-3992 Advanced - Module Metrics

Metrics for work order alerts, reset counter has been added.

DFO-3487 Advanced - New Maintenance Sequence Interval Type - Repeate on Aggregate Value

A new maintenance sequence interval type 'Repeate on aggregate value' for lines of type counter is available. It allows for preventive maintenance to be performed in relation to the aggregate value of counters.

DFO-2330 Advanced - Procurement Status

Two new status fields have been added to work orders: 'Procurement status' and 'Inventory status'. A periodic job updates status on work orders and if both are good to go, the work order will be updated to a new stage.

This functionality is covered by a feature.

DFO-3824 Advanced - Work Order - Improved Performance for Creating Work Orders

Performance improvements have been introduced in the process of creating work orders and work order lines.

DFO-2329 Advanced - Work Order Forecast - Create Purchase Requisition for Non-Stocked Item

New feature "Dynaway - Purchase requisition for non-stocked item on work order forecast" has been added to "Feature management" workspace. When enabled, it allows to create automatically purchase requisition for non-stocked item which is being added to work order forecast.

DFO-3864 **Advanced - Work Order Kitting - Feature**

A feature has been implemented covering the functionality for work order kitting. Enabled by default. If not used, the functionality can be disabled.

DFO-3405 **Advanced - Work Order Kitting - Form Part Grid**

Fixed an issue where the form part grid was incorrectly refreshed on the work order form.

DFO-3403 **Advanced - Work Order Kitting - Status**

Added status field to header view of work order kits.

DFO-4181 **Functional Location Type - Specification Type**

Fixed deleting a specification type for a functional location type. The reference between specification and location type was not deleted.

DFO-3202 **License Validation**

Included additional validation to check whether number of active maintenance workers and Dynaway mobile base users is permitted by the current license.

DFO-3343 **Maintenance Data Import - Batch Job Status**

Fixed bug in which batch job status was 'Ended' while Azure file share connection was not valid.

DFO-4106 **Maintenance Data Import - Company Time Zone**

Fixed bug in which company time zone was not applied into imported date fields.

DFO-4310 **Maintenance Data Import - Key Suffix**

Fixed bug which corrupted key value when suffix was set and not used in a file.

DFO-4124 **Mobile - Fixed Calculation of Available Quantities for Forecast Items**

The bug related to incorrect available quantities on some item forecast entries has been fixed, so that all available quantities relate correctly to available physical quantities from "On-hand inventory" page in D365FO.

DFO-4307 **Mobile - Module Configuration Grid**

Fixed an issue when a new configuration line of "All" scope without any additional field modification was not saved. Moreover, it is not possible anymore to trigger the delete configuration line functionality when one of the records is of "Default" scope.

DFO-2472 **Mobile - Query Limitations**

It is now possible to enable additional filtering on mobile saved searches which will limit data returned based on functional locations assigned to the maintenance worker.

DFO-4378 **Mobile - Update Item Image When Updating Item Image in Web Client**

Fix ensures that when user updates image for the item in D365FO web client, then image for this item is updated and visible correctly in BOM lines in mobile client.

DFO-3981 Mobile - Work Order Configurations

To improve the list of configurations for work orders some of the configurations has been renamed:

Allowed lifecycle states > Stage allowed stages

Create related work order > Work order create related Create work order line > Work order line create

DFO-3969 Mobile - Work Status Display Setup

New setup for work status display which allows to select color for each work status.

DFO-2560 Object Priorities - Job Type

Job type have been added to object priorities setup.

DFO-3247 Product-model Form

Fixed a bug which would lock user on Product-model form when opened from an object type without any products assigned.

DFO-3821 Request - Improved Performance for "Create Request"

Performance improvements have been introduced for "Create request" form.

DFO-4260 Work Order - Fixed Creating Quotation

There has been fixed an error thrown in situation when user set up standard hour forecast reduction functionality in the system and tried to create quotation from work order.

DFO-4320 Work Order - Prevent Opening New Form When Production Order Creation Cancelled

An empty "Production details" form is not opened anymore after cancelling the creation of a new production order from a work order.

DFO-4247 Work Order - Prevent Unintentional Work Order Creation

It is not possible anymore to create a new work order without clicking "OK" button on "Create work order" dialog form. Before, it was possible to create a new work order from this dialog when, e.g., "Ctrl + s" shortcut was used or upon dialog personalization, e.g., adding a new input field, without pressing the "OK" button.

DFO-4317 Work Order Checklists - Inform When Counter Was Ignored

An informational log message will be shown to the users when "Counter" field is not automatically filled out, based on the setup in the checklist template. A counter that is set in the checklist template might not support the object type that is assigned to the work order line.

DFO-4213 Work Order Checklists - Moved "Instructions" Field

User experience for "Instructions" field in "Work Order Checklists" form has been improved. Now "Instructions" field is not anymore in separate "Instructions" tab, but it is visible in "Properties" section just above "Note" field, which makes easier to access this field.

DFO-3754 Work Order Checklists - Update Attachment Icon Indicator

When a user starts switching between different checklist records right after entering "Work order checklist" form overview, the shown count on the attachment icon indicator in the top-right corner of the form now reflects the number of the attached documents.

Advanced Maintenance and Service 10.0.25.23 for D365 Operations 10.0 Update 45

DMO-4561 Authentication - Fix issue with reauthentication requiring MFA

Fixed an issue where reauthentication requires MFA where the dialog did not show and in some cases the user had to clear cache.

DMO-4533 Saved searches - Fixed an issue using the keyword searches while having a primary functional location

Fixed an issue where a user with a primary functional location would not get the expected results when searching with keywords on saved searches. This also applied to searching in saved searches filtered by functional locations.

DMO-4552 Work orders - Fixed an issue with printing work order reports

Fixed an issue where printing a work order report from the mobile client would print an empty report

DMO-4547 Work orders - Show overlay on completed and cancelled schedules of a work order

Fixed an issue where the overlay on completed and cancelled schedules on the work order details page was missing

DMO-4562 Authentication - Fix issue with reauthentication requiring MFA

Fixed an issue where reauthentication requires MFA where the dialog did not show and in some cases the user had to clear cache.

DMO-4560 Saved searches - Fixed an issue using the keyword searches while having a primary functional location

Fixed an issue where a user with a primary functional location would not get the expected results when searching with keywords on saved searches. This also applied to searching in saved searches filtered by functional locations.

DMO-3222 Attachments - Images with large dimensions are resized to fit the window

If the dimensions of an image attachment are large than the screen size, it is resized to fit the screen to make it easier to see and navigate away again.

Clicking the image will zoom it to full size, and clicking again will resize it to fit the screen once more.

DMO-3355 General - Planning board split from the rest of the application

The planning board has been split from the rest of the original application to its own separate application.

It is very important to notice that the planning board application needs its own website (can be same domain as the rest).

DMO-4135 Objects - Only active entries shown on the BOM list

Only entries which are currently active are now shown on the BOM list.

DMO- 4134 Objects - Show functional location hierarchy on the details page

Clicking the expand information button on the functional location block of the details page will show the hierarchy of functional locations for the current object.

DMO- 4136 Objects - Timeline entries updated to show ID, description and stage where applicable in non-expanded mode

Timeline entries for work orders and requests now show the description as well as work order stage while the entries are in a collapsed state in order to make it easier to get an overview.

DMO-4133 Objects and work orders - Object tree can be hidden if not needed

The object tree tab can be hidden using the module configuration *Object tree* under *Objects*.

DMO-3557 Planning board - Added action to go to work order details page if available

It is not possible to navigate to the details page of a work order or schedule if the module configuration for *Work execution mobile application* under *Planning board* has been filled in. It requires that the planner has access to this application as well.

DMO-909 Planning board - Auto split can be cancelled if not enough capacity

When using the auto split functionality, the planner is now warned if there is not enough capacity for the worker to split the work. The planner can then cancel the action or continue anyway.

DMO-3980 Planning board - Fixed issue where read-only mode could be undone

Fixed an issue where the read-only mode of the planning board could be undone by deleting a planning note, which should not have been possible in this mode.

DMO-4148 Planning board - Fixed issue with not showing full tooltips for schedules in top row

Fixed an issue where the tooltips for schedules in the top row would be outside the planning grid so the information was hidden from the user.

DMO- 4129 Planning board - Object name and functional location name displayed on unscheduled work

The unscheduled work cards now show the object name and functional location name to make it easier to determine these properties.

DMO-1384 Planning board - Project category shown on schedule split based on forecasts until draft is saved

When splitting a schedule based on the hour forecasts, the project category can be seen on the schedules if it is focused (highlighted on the right side) and on the details dialog until the draft has been saved.

DMO-1581 Planning board - Searching for work also searches on the functional location

When searching for work with keywords on a saved search, the functional location is also queried, meaning the list of properties queried are: work order ID, work order description, job type ID, lifecycle state ID, asset ID, functional location ID.

DMO- 4128 Planning board - Split schedule based on hour forecasts only possible for unscheduled work order lines

The option to split a work order line based on hour forecasts is now only possible when dragging a line from the unscheduled list to the grid.

DMO- 111 Planning board - Split schedule over a set number of days

When using the *Split* action on a schedule, the planner can now enter a number of days to split the schedule on. Non-working days are skipped. Leaving the number of days to 1 the action will work as today meaning the schedule will be split into two schedules on the same day. If the number of days is greater than 1 the new schedules will all have the duration of *Second* on the split dialog.

DMO-3126 Planning board - The list of unscheduled entries can be hidden in standard mode

The list of unscheduled entries can be hidden and brought back using a new view switch on the planning board. This is not possible in read-only mode where it is always hidden.

DMO-3646 Planning board - The navigation is repositioned from the left side to the top

The navigation of the planning board is moved to the top of the page and consists of navigation to: Settings and sign out.

DMO-659 Planning board - Week numbers can be enabled on the calendar grid

Using the new module configuration *Week numbers* under *Planning board* the planner can enable week numbers on the calendar grid and date picker.

DMO-882 **Settings - Minimize the amount of screen space taken up by used legal entities**

If the user has been logged in to multiple legal entities, the information for the current is expanded while the others is minimized to just show the name and if there is uncommitted data. Each entry can be expanded to show all information.

DMO-3796 **Synchronization - Synchronization frequency controlled by module configuration**

It is now possible to change the synchronization frequency of the mobile clients by updating the associated module configuration in D365. The default value is 30 seconds, and any value lower than 10 seconds are ignored.

DMO- 3732 **Work orders - Computed end date available for sorting and display**

The customizable cards for saved searches allows the computed end date to be shown on the cards, and the saved search can filter and sort on the end date. The end date is the actual end date if it exists, otherwise the scheduled end date if that exists, otherwise the expected end date.

DMO-4132 **Work orders - Customize cards from saved searches and on work order details page**

Added the option to customize which properties are shown on cards of work orders and work order lines on the saved searches for work as well as work order lines shown on the work order details page.

DMO-4149 **Work orders - Fix erroneous access to the *Schedule to me* action on a work order line**

Fixed an issue where the worker was able to schedule an existing work order line to themselves even if the associated module configuration *Work order schedule modifications* was set to *false*

DMO-4175 **Work orders - Fix issue where start time of hour registration could be negative**

Fixed an issue where the start time of an hour registration could be a negative number even when hour registrations were not created with from and to time.

DMO-3196 **Work orders - Hide hour forecasts and scheduled durations**

Using the module configuration *Forecasted and scheduled hours* under *Work orders* the forecasted hours and schedule durations can be hidden on the saved search result list, the details pages, and hour registration page.

DMO-2213 **Work orders - Print work order report**

It is now possible to print a work order report from the mobile client. A set of report templates and available printers are made available by D365 which can be used by the mobile client to print a report. It is possible to set default printer and default work order report using the module configurations.

DMO-3049 **Work orders - Responsible worker can be shown on saved search result cards**

The saved search cards can now show the responsible worker on the saved search cards for work. This is done using the *Card design* module configurations.

DMO-4130 **Work orders - The list of tabs on the work order line details page reordered**

The list of tabs on the work order line details page have been reordered to have purchase orders and purchase requisitions together at the bottom in an effort to keep related information close together.

DMO-3972 Work orders - The purchase orders tab shows the number of purchase orders

The purchase orders tab now shows a number badge with the number of available purchase orders. This feature is only available while the application has network connection.

DMO-2168 Work orders - The saved search for "Work scheduled to me" can be hidden

Using the module configuration *Scheduled to me* under *Work orders* the saved search for "Work scheduled to me" can be hidden.

Advanced Maintenance and Service 10.0.25.22 for D365 Operations 10.0 Update 45

ID	Title
DFO-3250	Functional Location & Object - Unify Behaviour of 'Value' Lookup Form Depending on the chosen 'Data type' value, the behaviour of 'Value' lookup form was unified when setting up specification lines related to functional locations and objects. That is, the lookup form will be shown for boolean and string types only.
DFO-1499	Install Object - Object Lookup Error Fixed object lookup in "Install object" dialog, which now displays correctly both objects in the left and related object specifications in the right.
DFO-3227	Linked Job Types - Content of 'Variant' Lookup Is Based On 'Job type' Value The content of 'Variant' lookup form is now based on the value set in 'Job type' when setting up linked job types.
DFO-2317	Maintenance Sequence - Only One Active Work Order There is possibility to avoid creating of redundant work orders from maintenance sequences. To active this functionality check 'Only one' checkbox on maintenance sequence.
DMO-1164	General - Barcode and QR code scanning In all saved searches and when searching for items when registering item consumption, it is now possible to use both QR code and barcode scanning. All major barcode types are supported, such as Type 128 and Type 39
DMO-3188	Item registration - Allow changing dimension values if not locked by functional location Updated the item registration page to allow the worker to change dimension values while creating or editing item registrations. Only if the site and warehouse on the functional location are set to be used, will these two dimensions be locked.
DMO-3737	Planning board - Keyword searches now also search in object ID of work order lines Using the keyword search on a saved search on the planning board now also searches in object IDs of related work order lines.
DMO-3739	Work orders - The line details page now shows job type, variant and trade if available The work order line details page now displays the job type, job variant, and job trade if they have been specified for the line. The job variant has also been added to the possible filters for saved searches where applicable.

ID	Title
DFO-3250	<p>Functional Location & Object - Unify Behaviour of 'Value' Lookup Form Depending on the chosen 'Data type' value, the behaviour of 'Value' lookup form was unified when setting up specification lines related to functional locations and objects. That is, the lookup form will be shown for boolean and string types only.</p>
DFO-1499	<p>Install Object - Object Lookup Error Fixed object lookup in "Install object" dialog, which now displays correctly both objects in the left and related object specifications in the right.</p>
DFO-3227	<p>Linked Job Types - Content of 'Variant' Lookup Is Based On 'Job type' Value The content of 'Variant' lookup form is now based on the value set in 'Job type' when setting up linked job types.</p>
DFO-2317	<p>Maintenance Sequence - Only One Active Work Order There is possibility to avoid creating of redundant work orders from maintenance sequences. To active this functionality check 'Only one' checkbox on maintenance sequence.</p>
DMO-1164	<p>General - Barcode and QR code scanning In all saved searches and when searching for items when registering item consumption, it is now possible to use both QR code and barcode scanning. All major barcode types are supported, such as Type 128 and Type 39</p>
DMO-3188	<p>Item registration - Allow changing dimension values if not locked by functional location Updated the item registration page to allow the worker to change dimension values while creating or editing item registrations. Only if the site and warehouse on the functional location are set to be used, will these two dimensions be locked.</p>
DMO-3737	<p>Planning board - Keyword searches now also search in object ID of work order lines Using the keyword search on a saved search on the planning board now also searches in object IDs of related work order lines.</p>
DMO-3739	<p>Work orders - The line details page now shows job type, variant and trade if available The work order line details page now displays the job type, job variant, and job trade if they have been specified for the line. The job variant has also been added to the possible filters for saved searches where applicable.</p>

	Title
DMO-3234	<p>Assets - Creating work order from object under warranty gives warning When creating a work order from an object under warranty, the user is now presented a warning to inform them that the object is under warranty. The warning is presented when creating a work order directly from an object under warranty or from a request on an object under warranty.</p>

DMO-3250	Objects - Show object tree for current object A new tab page has been added to the object details page, where the worker can see and navigate the object tree for the current object.
DMO-3166	Planning board - Added option to delete work order lines from unscheduled work It is now possible to delete an unscheduled line from the planning board. The current work order stage must still allow the operation, and no transactions may be associated with the work order line.
DMO-892	Work orders - Correct PASS/FAIL for checklist measures with the same min and max Fixed an issue where a checklist measurement with the same value for min and max would approve all entered values. The min/max are now correctly followed to give a PASS or FAIL value to the checklist.
DMO-3161	Work orders - Fixed an issue with getting next results when viewing saved search as work orders Fixed an issue where a saved search shown as work orders would only fetch the first 50 work order lines if the resulting work orders would fit on a single screen
DMO-1903	Work orders - Fixed issue with possible incorrect project category on editing hour registrations Fixed an issue where the project category of an hour registration would be shown as the default project category for the current employee, when editing an hour registration, even if the actual project category was different
DMO-3089	Work orders - Fixed issue with starting with 0 in month input field Fixed an issue where starting to type in the day or month for a date input field with a 0 would reset the input. Now typing in either of 2 or 02 will result in February.
DMO-1431	Work orders - Project category displayed for hour forecasts and registrations The project category is now shown on the overview page for all hour forecasts and registrations.
DMO-3159	Work orders - The number for checklist lines on the work order line details page shows completed / total Updated the number badge for the checklist tab on the work order line details page from only showing (total number of checklist lines) to now showing (number of completed checklist lines / total number of checklist lines).
DFO-2164	Functional Location Types - Functional Location Types Number Previously, object specifications requirements added to functional location types were updating the number in "Functional location types" column. With this fix, specifications added to functional location types update the number now.
DFO-2519	Object Calendar Line – Disappears Fixed object calendar lines disappearing after maintenance sequence scheduling. Error was caused by active work orders not being taken into account during calculation.
DFO-2293	Work Order Line Forecast - Sales Tax Group Fixed initial forecasts for a newly created work order. Sales tax group is now correctly initialized.

Advanced Maintenance and Service 10.0.20.19 for D365 Operations 10.0 Update 41

	Title
DMO-2145	Faults - Added filtering option to fault symptoms Added the option to filter fault symptoms by typing in part of the symptom.

DMO-2515	Objects - Counter replacements are easier to distinguish from regular readings Updated the entries in the asset counter readings tables to have a more distinct look when they refer to a counter replacement.
DMO-1203	Planning Board - Better readability on cards in detailed view Updated the cards on detailed view to show more of the descriptions and allowing the text to wrap, in order to not cut off important information..
DMO-2569	Planning Board - Fix delete button on team members Fixed an issue where the team members could not be deleted from the list of workers if the planner had to scroll down the list to find them.
DMO-2022	Planning Board - Show work order information when not in detailed view When the planning board is not in detailed view, clicking a schedule or set of schedules now shows the work order information in the panel on the right-hand side.
DMO-2013	Planning Board - The scheduled day and time visible on each split when viewing a work order It is now possible to see the scheduled day and time in addition to the scheduled worker for all schedules on a work order in focus, i.e. displayed in the right-hand panel.
DMO-1863	Planning Board - Worker group and trade lists show both ID and description The lists showing worker groups and trades when working with teams now show both ID and description, to make it easier to distinguish between entries.
DMO-2337	Purchase requisitions - Fix missing item name on search Fixed an issue where the item name of search results was not shown for purchase requisitions
DMO-1984	Work Orders - Fix search for responsible worker Fixed an issue where searching for responsible workers did not work when using capital letters.

Advanced Maintenance and Service 10.0.17.18 for D365 Operations 10.0 Update 37

	Title
DMO-2006	Planning board - Fix issue with resetting estimated hours Fixed an issue where the actual estimated hours were not used when unscheduling a schedule.
DMO-2134	Requests - Fixed an issue where a work order could be created when not allowed Fixed an issue where a worker could create a work order from a request even though this was not allowed given the current stage.
DMO-2131	Work orders - Create purchase requisitions on a work order line If enabled for the worker in module configuration, the worker can add purchase requisitions based on an item or a category as setup in D365F&O.

DMO-2012	<p>Work orders - Default work order descriptions from D365F&O can now be used when creating a work order on the mobile client</p> <p>If there are default work order descriptions for the selected work order type, or any not related to a work order type, these will be available to select from a dropdown on the mobile client when creating a work order.</p>
DMO-1868	<p>Work orders - Fixed an issue with number of items shown when searching for items</p> <p>Fixed an issue where only the first 50 items of an item search were shown. Now the next search results are correctly fetched when scrolling down the list.</p>
DMO-2040	<p>Work orders - If working to midnight to Time can now be set to 00:00 or 12:00AM</p> <p>If the to Time of a time registration is set to 00:00 (or 12:00 AM) it is now interpreted as midnight between the registration date and the next day, so the worker will not register negative hours.</p>
DMO-2135	<p>Work orders - Show requester name on work order line details</p> <p>If a work order is created from a request, that information is now shown on the work order line details page as a link to the request as well as the name of the requester.</p>
DFO-1305	<p>EAM - Customer from Work Order Header Displayed in Work Order Line Details</p> <p>Data regarding customer from work order header is displayed now in work order line details instead of data regarding customer from object on the work order line.</p>
DFO-1444	<p>EAM - Fixed Functional Location Specifications</p> <p>Functional location type specifications are now correctly used when creating a functional location.</p>
DFO-1543	<p>EAM - Fixed Item Actual Costs in Cost Control Workspace</p> <p>Fix regards getting data related to item actual costs. Item actual costs are now correctly aggregated and included in total actual costs in cost control workspace.</p>
DFO-1262	<p>EAM - Fixed Omit Overlap Option With Tolerance</p> <p>While scheduling object calendar lines "Omit overlap", "Tolerance before" and "Tolerance after" options are now taken correctly into account for all repeated from interval types on maintenance sequence: "Repeated from last work order", "Repeated from plan date" and "Repeated from start date".</p> <p>Fix causes that overlapping object calendar lines within tolerance dates are not created anymore.</p>
DFO-1557	<p>EAM - Fixed Stage Lookup in Update Work Order Stage Service</p> <p>Columns ordering in stage lookup in update work order stage service has been fixed. Now stage ID is the first column and stage name is the second column which provides better user experience.</p>
DFO-1576	<p>EAM - Fixed Work order Line Field Being Mandatory in Work Order Journals</p> <p>Work order line field has been made mandatory for item, expenses and fee work order journals so that user can see more informative message when trying to save work order journal line with blank work order line field.</p>

Advanced Maintenance and Service 10.0.16.17 for D365 Operations 10.0 Update 37

	Title
DFO-	Checklist Measurement Values

891	Fixed a bug which allowed for the minimum measurement value to be greater than maximal measurement value.
DFO-1097	Data Entity - Added missing fields to "EAM Work order schedule parameters" Three missing fields: "Limit to responsible", "Limit to preferred" and "Limit to location" have been added to "EAM Work order schedule parameters" data entity.
DFO-1095	Data Entity - Added missing and removed unnecessary fields from "EAM Work order stages" Missing fields: "Process checklist" and "Sign-off report terms and conditions" have been added and unnecessary fields: "Factor" and "Kanban stage" have been removed from "EAM Work order stages" data entity.
DFO-1096	Data Entity - Added missing field to "EAM Parameters" Missing "Real time update" field has been added to "EAM Parameters" data entity.
DFO-911	Data entities made cross-company compliant All EAM data entities which use unmapped fields with edit and display methods in order to calculate some data have been made cross-company compliant when expose data by OData URL with 'cross-company=true' parameter. In that case all calculated data are exposed correctly by data entities in all companies which records belong to.
DFO-1048	Forecast Financial Dimensions Financial dimensions on work order forecasts are now correctly copied to work order journals.
DFO-1168	Functional Location - Stage Update Fixed when updating the stage of a functional location, the objects installed are also updated if set up on the functional location stage.
DFO-906	Mobile - Removed unused configuration The mobile configuration 'Spare parts' is unused and is therefore removed.
DFO-1008	Object Specification Overview If using the feature new grid, a error was thrown when opening the form. This has been fixed.
DFO-1200	Mobile - Improved performance of view used by the mobile client
DMO-1913	Mobile - Labels have been updated for: (EAM) fr-FR and pt-BR; (AM) es-ES, nb-NO, and pt-BR.
DFO-1240	Labels - Updated labels for da-DK
DFO-1241	Labels - Updated labels for es-ES
DFO-1242	Labels - Updated labels for fr-FR
DFO-1244	Labels - Updated labels for pt-BR
DMO-1689	Attachments - An issue where not all actions for attachments were visible in some situations has been fixed.
DMO-1462	Requests - After creating a new request, the application navigates to the new request
DMO-1611	Work order lines/jobs - Fixed checklist page with 0 or 1 header not loaded correctly.
DMO-1758	Work orders -Fixed registration date switching one day back when time registrations was edited.

ID	Title
DFO-985	Maintenance Sequences - Error When Based on Counter Values When object counter values were not entered in a chronological sequence calculation of slope/rate of change value, used by the schedule maintenance sequence, would be wrong/fail resulting in no object calendar lines being generated.
DFO-857	Requests - Stage change on requests from mobile app not working Stage changes on requests performed on the mobile app was not reflected in data in D365.
DMO-1456	Employee IDs with capital letters cannot load saved searches Fixed an issue where employee IDs with capital letters was not used correctly when getting the list of saved searches, so none would be shown.
DMO-1420	Only first schedule is updated when changing work status Fixed an issue where only the first schedule of a work order line/job would be updated when changing work status on any schedule. So now the schedule, for which the work status is updated, will be updated.
DMO-1465	Work order lines/jobs - Fix to show each hour forecast only once Fixed an issue where hour forecasts were shown once per schedule on a line/job instead of just once per line/job.
DMO-1426	Saved search - Quick filtering is no longer case sensitive and bulk actions works only on visible entries Fixed an issue when quick filtering of entries was case sensitive and the bulk operations of <i>select all</i> or <i>clear selection</i> would apply to both visible and invisible entries.
DMO-1223	Requests - Now referencing yourself in the <i>Responsible worker</i> filter no longer shows all requests Fixed an issue where referencing yourself in the <i>Responsible worker</i> filter would not be correctly resolved and resulted in showing all requests.
DMO-1461	Requests - Navigate to work order after creating from request Fixed an issue where the application did not navigate to the newly created work order after converting a request to a work order. If the newly created work order is not scheduled to the worker, the application navigates back to the request as, in that scenario, the work order would not automatically be synchronized.
DMO-1459	Planning Board - First time use of planning board opens without default selections Updated the planning board to start up without any default selections if no teams or saved searches have been created so that it does not start up with all workers and all work orders shown.
DMO-1383	Navigation - Navigating back to the index page using the back button no longer breaks the page Fixed an issue where navigating from the index page to somewhere else in the application and back again using the <i>back</i> button could cause the index page to break and no longer work.
DMO-1589	Login - Fix login problem with On-Premise install Fixed an issue with login on On-Premise installations of D365F&O so that the application still uses implicit flow since authorization flow with PKCE is not yet supported for AD FS.
DMO-1464	Labels - Updated labels for da-DK, fr-FR, nb-NO, nl-NL, pt-BR Labels fixed and/or updated for a handful of languages

Advanced Maintenance and Service 10.0.14.15 for D365 Operations 10.0 update 33

ID	Title
2010.0.0.0-1	Fixed copying attachments from job type setup checklist lines to the work order checklist lines to have all additional materials (documents, images etc.) in work order checklist when working on it.
2010.0.0.0-2	Fixed filling project ID during creating production order from work order to improve user experience and avoid selecting incorrect project for new production order.
2010.0.0.0-3	Fixed filling project ID during creating production order from work order to improve user experience and avoid selecting incorrect project for new production order.
2010.0.0.0-4	Fixed possibility to enter min and max values for manual checklist lines on work order so that checklist lines do not fail when they should not.
2010.0.0.0-5	Fixed "Copy setup" functionality on "Job type setup" to add possibility to copy description of job type setup and documents attached to it.
2010.0.0.0-6	Fixed replacement object functionality on work order which does not work when work order is being ended in order to end successfully work order and put object from work order line and replacement object into correct places in object structure and install both objects in correct functional locations.
2010.0.0.0-7	The mobile solution now supports document attachments stored on a Sharepoint site.
2010.0.0.0-8	Fixed an issue where the client could incorrectly detect multiple running instances when the application page was refreshed.
2010.0.0.0-9	Fix issue with login from iPhone/iPad. The mobile app now supports Authorization Code Flow with Proof Key for Code Exchange (PKCE) - updated from Implicit Code Flow. The changes required are described in the installation guide for the mobile app.
2010.0.0.0-10	Fix issue with missing checklist line status and fixed an issue where checklist lines with status set to FAIL would not send that data in.
2010.0.0.0-11	Fix issue with missing last entry on long list of checklist lines. An issue where the mobile app could hide the last entry of a long list of checklist lines behind the save button has been fixed.

Advanced Maintenance and Service 10.0.12.14 for D365 Operations 10.0 update 33

ID	Title
1904.0.11.0 -1	Fixed category is changed/removed on work order journals when selecting a resource.
1904.0.9.0 -1	Fixed issue where a previous object calendar entry for a request would prevent the creation of a work order from that request.
1904.0.9.0 -2	Fixed obsolete method calls in workspaces causing best practice warnings.

Advanced Maintenance and Service 10.0.10.13 for D365 Operations 10.0 update 24

ID	Title
VSO#98615	In PU version 10.0.11 the MS has converted "field groups containing invalid field references" compile warnings into compile errors.

	Please refer MS link for more details. AMS 10.0.10.13 is pre-requisite to uptake MS 10.0.11 or higher.

1810.1.0.2-6	Fixed license not checked in batch
1810.1.0.2-7	Fixed processing checklists multiple times

Advanced Maintenance and Service 81.1.1.11 for D365 Operations 8.1 Update 21

ID	Title
1810.1.0.0-1	Fixed multiple object types on rounds on functional locations
1810.1.0.0-2	-Rewrite of mobile data synchronization framework to utilize SQL Server change tracking functionality
1810.1.0.0-3	Data entity Spare sparts: setting approval through entity is now working (MROParmObjectTypeSetupSparePart)
1810.1.0.0-4	Data entity Scheduled executions: fixed issue if only ID is set (MROParmScheduledExecution)
1810.1.0.1-1	Fixed table index issues on MROParmWorkerPreferred, MROParmWorkerResponsible, MROParmWorkOrderParentProject and MROParmWorkOrderProjectGroup. This is for customers who are upgrading and are using Asset Service Management.

Advanced Maintenance and Service 81.20.1.5 for D365 Operations 8.1 Update 20

ID	Title
66566	Unable to open Customers list page
66567	Unable to export Work orders to excel

Advanced Maintenance and Service 80.15.3.4 for D365 Operations 8.0 Update 15

ID	Title
64882	Auto object creation doesn't work with BOM set up at Multi level.
65058	SLA score changes doesn't consider earlier stage changes.
65237	Total object profitability amount showing incorrect value on report.

Advanced Maintenance and Service 80.15.2.7 for D365 Operations 8.0 Update 15 – August 2018

ID	Title
1804.0.1.0-1	Fixed allowed edit work order type ID
1804.0.1.0-2	Edit button removed from object specification overview
1804.0.1.0-3	Fixed lookup for categories on parameter form
1804.0.1.0-4	Fixed adding objects to contracts when adding object payment lines
1804.0.1.0-5	Fixed creating work orders from common data source
1804.0.1.0-6	Fixed label on contract payment lines

Advanced Maintenance and Service 1712.12.2.67 for Dynamics 365 for Finance and Operations June 2018

ID	Title
1712.1.0.0-1	Fixed missing data on maintenance status
1712.1.0.0-2	Fixed work order is shown after creation

1712.1.0.0-3	Fixed count of references for job type setup
1712.1.0.0-4	Fixed error when cancelling creation of work order
1712.1.0.0-5	Fixed posting journals with approval stage
1712.1.0.0-6	Fixed fact box for work order pools, counts only active pools

Advanced Maintenance and Service 1712.12.2.66 for Dynamics 365 for Finance and Operations 7.3

ID	Title
1712.12.2.66	Fixed integer invent dimension for mobile (Requires mobile client version: 92.10.5 or later)

Advanced Maintenance and Service 1712.12.1.65 for Dynamics 365 for Finance and Operations Dec 2017

ID	Title
1707.1.0.2-1	Fixed create work orders from requests on platform update 12
1707.1.0.2-2	Fixed broken document references for mobile client
1707.1.0.1-1	Fixed creating work orders from rounds
1707.1.0.1-2	Fixed security permissions for request workspace
1707.1.0.1-3	Fixed pending item count
1707.1.0.1-4	Fixed finding job type setup
1707.1.0.1-5	Calculating instalments for contracts now respect end date
1707.1.0.1-6	Fixed maintenance status calculation
1707.1.0.1-7	Fixed security permissions for object type
1707.1.0.1-8	Fixed security permissions for stage group stages
1707.1.0.1-9	Fixed security permissions for document type parameters
1707.1.0.1-10	Fixed work order report scheduled date time
1707.1.0.1-11	Fixed object counter unit
1707.1.0.1-12	Fixed attachments on mobile client
1707.0.3.0-1	Fixed issue with counter based maintenance plans, where planning fails if slope is too narrow
1707.0.3.0-2	Fixed time zone issue on work order report
1707.0.3.0-3	Fixed entity for work order stages, new data package has been uploaded

Advanced Maintenance and Service 1707.8.1.8 for Dynamics 365 for Finance and Operations July 2017

ID	Title
1707.0.2.0-1	Fixed work order timeline
1707.0.2.0-2	Fixed category initialization on expense journals
1707.0.2.0-3	Fixed planned absence on planning board
1707.0.2.0-4	Fixed project types for contracts. They can now be internal
1707.0.2.0-5	Fixed deletion with multi-select on worker groups

1707.0.2.0-6	Fixed updating sales prices when creating new expense line
1707.0.2.0-7	Fixed latitude and longitude are now set from mobile
1707.0.2.0-8	Fixed expense registration from mobile
1707.0.2.0-9	Fixed stage change when scheduling work orders
1707.0.2.0-10	Fixed work order report, added object notes
1707.0.2.0-11	Fixed labels issues
1707.0.2.0-12	Fixed entities
103.0.10.0-1	Fixed issue with updating default financial dimensions on objects from functional location
103.0.9.0-1	Fixed security configuration issue with workspaces.
103.0.9.0-2	Fixed potential issue with Request entity not creating Object calendar lines
103.0.9.0-3	Fixed issue with Functional location entity not updating the Active flag
103.0.8.0-1	Fixed UI issue with Description field on Job type setup
103.0.8.0-2	Fixed potential issue with data entity 'EAM Job type setup checklist'
103.0.7.0-1	Fixed data entity issue with importing 'EAM Job type setup checklist'
103.0.6.0-1	Fixed data entity issue with importing 'Job type setup'
103.0.5.0-1	Fixed label issues
103.0.5.0-2	Fixed wrong configuration key on requests type ID
103.0.5.0-3	Fixed Notes and Work order buttons from Work order calendar
103.0.5.0-4	Fixed deletion of fault symptom relations
103.0.5.0-5	Fixed sort order on transactions
103.0.5.0-6	Fixed security for contract manager
103.0.5.0-7	Parent object removed from Object item
103.0.5.0-8	Fixed serial number not added to object for objects created from sales order lines
103.0.5.0-9	Fixed Project group setup, setting object type required object
103.0.5.0-10	Fixed entities for sub-objects. Stage log and functional location.
103.0.3.0-1	Fixed contract stage group bug
103.0.2.0-1	Fixed calendar when calculating object KPI
103.0.2.0-2	Fixed labels in reports
103.0.2.0-3	Fixed mobile integration

Advanced Maintenance and Service 7.3.1611.101 for Dynamics 365 Operations 1611

ID	Title
AXEAM-U3-1	Fixed missing validate and post journals for Maintenance Manager and Clerck security roles
AXEAM-U3-2	Fixed dispatch board
AXEAM-U3-3	Fixed missing stage ID on request details report
AXEAM-U3-4	Fixed calendar when calculating object KPI
AXEAM-U3-5	Fixed labels in reports

AXEAM-U3-6	Fixed mobile integration
AXEAM-U3-7	Fixed contract stage group bug
AXEAM-U3-8	Fixed label issues
AXEAM-U3-9	Work order times report has been removed
AXEAM-U3-10	Fixed wrong configuration key on requests type ID
AXEAM-U3-11	Fixed Notes and Work order buttons from Work order calendar
AXEAM-U3-12	Fixed deletion of fault symptom relations
AXEAM-U3-13	Fixed sort order on transactions
AXEAM-U3-14	Fixed security for contract manager
AXEAM-U3-15	Loan ID added to the loan form
AXEAM-U3-16	Parent object removed from Object item
AXEAM-U3-17	Fixed serial number not added to object for objects created from sales order lines
AXEAM-U3-18	Fixed Project group setup, setting object type required object
AXEAM-U3-19	Fixed entities for sub-objects. Stage log and functional location

Previous releases

ID	Title
AXEAM-U2-1	Fixed fact box tree control
AXEAM-U2-2	Lookup for functional location. My locations tab is hidden if there is no setup on user
AXEAM-U2-3	Fixed functional location active, was not updated during stage change
AXEAM-U2-4	Contract instalments. Pending instalments can now be deleted
AXEAM-U2-5	Added parameter controlling product name localization for work order reports
AXEAM-U2-6	English (en-us) labels only, translation is pending
AXEAM-U2-7	Fixed missing warranty information in timeline

Notes for developers:

Moving from 101.0.0.0 and onwards. We have removed table inheritance from stages.

New tables for stage setup are named MROParmStg*

Old DEPRICATED tables for stage setup are named MROParmStage*

There is a runnable job for upgrading your data.

4. Known Issues

ID	Title
65238	Auto object creation is not working for multilevel BOM set up for Intercompany.
AXEAM-U3-20	Work breakdown structure data is missing for project activities.
AXAEAM-1707-22	Browser login token timeout issue. Issue is reported at Microsoft and is awaiting fixing.
